

Syllabus Covered:

- Introduction to Operating Systems
 - Process Management: Processes, Context Switch
 - CPU Scheduling Algorithms
 - CPU Scheduling Algorithms - Numericals
 - Revisiting OOPS, Interfaces and Abstract Classes
-

Q1. A student runs a Java program that prints output on the screen. Which Operating System services may be involved?

- A. Program execution
- B. I/O management
- C. File system management
- D. CPU scheduling

Correct Answers: A, B, D

Q2. Which statements correctly describe an Operating System?

- A. It acts as an interface between user programs and hardware
- B. It manages resources like CPU, memory, and files
- C. It is only used for writing Java code
- D. It helps run multiple programs efficiently

Correct Answers: A, B, D

Q3. A program wants to create a new file and write data into it. Why does it need OS support?

- A. File access is controlled by the OS
- B. Direct hardware access is usually protected

- C. The OS provides file-related services
- D. The program must manually rotate the disk

Correct Answers: A, B, C

Q4. Which are examples of Operating System responsibilities?

- A. Memory allocation
- B. CPU scheduling
- C. Error detection
- D. Writing problem statements for exams

Correct Answers: A, B, C

Q5. Which statements about system calls are TRUE?

- A. They allow programs to request OS services
- B. They help user programs access protected resources safely
- C. They are only used for printing comments
- D. File operations may require system calls

Correct Answers: A, B, D

Q6. A user opens a browser, music player, and code editor together. What helps the system manage these applications?

- A. CPU scheduling
- B. Process management
- C. Memory management
- D. Ignoring all background processes

Correct Answers: A, B, C

Q7. A student saves a text file from a code editor. Which OS services are most directly involved?

- A. File management
- B. I/O management
- C. Program execution
- D. Changing the Java class name automatically

Correct Answers: A, B, C

Q8. Which of the following are examples of I/O devices managed by the OS?

- A. Keyboard
- B. Mouse
- C. Printer
- D. Variable name inside Java code

Correct Answers: A, B, C

Q9. Which statements about file management are TRUE?

- A. The OS helps create files
- B. The OS helps delete files
- C. The OS manages directories
- D. The OS permanently prevents all file deletion

Correct Answers: A, B, C

Q10. Which OS service is most directly involved when a program crashes due to illegal memory access?

- A. Protection and security
- B. Error detection

- C. Process management
- D. Wallpaper management

Correct Answers: A, B, C

Q11. Which statements about a Process are TRUE?

- A. A process is a program in execution
- B. A process has its own state
- C. A process may have a Process Control Block
- D. A process is only a file stored on disk and never executes

Correct Answers: A, B, C

Q12. Which items may be part of a process address space?

- A. Code section
- B. Stack
- C. Heap
- D. Printer cable

Correct Answers: A, B, C

Q13. Which statements about PCB are TRUE?

- A. PCB stores important information about a process
- B. PCB may store process state
- C. PCB may store program counter information
- D. PCB stores the student's attendance percentage

Correct Answers: A, B, C

Q14. A process is waiting for CPU time but is not currently executing. Which state is most suitable?

- A. Ready
- B. Running
- C. Terminated
- D. New

Correct Answer: A

Q15. A process is currently using the CPU. Which state is most suitable?

- A. Running
- B. Waiting
- C. Ready
- D. Terminated

Correct Answer: A

Q16. Which transitions may happen in a process lifecycle?

- A. New to Ready
- B. Ready to Running
- C. Running to Terminated
- D. Terminated to Running automatically without creation

Correct Answers: A, B, C

Q17. Which information is important during a context switch?

- A. Program Counter
- B. CPU registers

- C. Process state
- D. Desktop wallpaper

Correct Answers: A, B, C

Q18. Why does context switching create overhead?

- A. CPU state must be saved
- B. Another process state must be restored
- C. Useful CPU execution time is spent in switching
- D. It permanently deletes the process

Correct Answers: A, B, C

Q19. Which statements about a scheduler are TRUE?

- A. It helps decide which ready process gets CPU
- B. It affects waiting time
- C. It affects response time
- D. It always executes processes alphabetically

Correct Answers: A, B, C

Q20. Which statements correctly describe context switching on a single-core CPU?

- A. Only one process runs at an exact instant
- B. The CPU may switch quickly between processes
- C. It can create an illusion of multitasking
- D. All processes execute truly parallel at the exact same instant

Correct Answers: A, B, C

Q21. Which statements about FCFS Scheduling are TRUE?

- A. Processes are executed in arrival order
- B. It is non-preemptive
- C. A long process can delay shorter processes
- D. It always gives the minimum average waiting time

Correct Answers: A, B, C

Q22. Which statements about SJF Scheduling are TRUE?

- A. It gives preference to shorter burst time processes
- B. It may reduce average waiting time
- C. Burst time estimation is important
- D. It always ignores burst time

Correct Answers: A, B, C

Q23. Which statements about SRTF Scheduling are TRUE?

- A. It is the preemptive version of SJF
- B. A newly arrived shorter job may preempt the running job
- C. Remaining burst time is considered
- D. Once a process starts, it can never be stopped

Correct Answers: A, B, C

Q24. Which statements about Priority Scheduling are TRUE?

- A. Processes are selected based on priority
- B. It may be preemptive or non-preemptive

- C. Starvation may occur in priority scheduling
- D. Priority values are never used in scheduling

Correct Answers: A, B, C

Q25. Which statements about Round Robin Scheduling are TRUE?

- A. It uses a time quantum
- B. It is preemptive
- C. It is commonly used for time-sharing systems
- D. It always behaves exactly like SJF

Correct Answers: A, B, C

Q26. Which scheduling metric is calculated as $CT - AT$?

- A. Turnaround Time
- B. Waiting Time
- C. Burst Time
- D. Response Time

Correct Answer: A

Q27. Which scheduling metric is calculated as $TAT - BT$?

- A. Waiting Time
- B. Completion Time
- C. Arrival Time
- D. Priority

Correct Answer: A

Q28. Which statements about Burst Time are TRUE?

- A. It represents CPU execution time required by a process
- B. It is important in SJF
- C. It is always equal to arrival time
- D. It may affect scheduling decisions

Correct Answers: A, B, D

Q29. Which statements about Arrival Time are TRUE?

- A. It tells when a process enters the ready queue
- B. It helps decide scheduling order
- C. It is always equal for all processes
- D. It is used while calculating turnaround time

Correct Answers: A, B, D

Q30. Which statements about Completion Time are TRUE?

- A. It tells when a process finishes execution
- B. It is used to calculate Turnaround Time
- C. It is always equal to Burst Time
- D. It may differ based on scheduling algorithm

Correct Answers: A, B, D

Q31. Using FCFS Scheduling:

Process | AT | BT

P1 | 0 | 3

P2 | 1 | 4

P3 | 2 | 2

Which statements are TRUE?

- A. Execution order is $P1 \rightarrow P2 \rightarrow P3$
- B. Completion Time of P1 is 3

- C. Completion Time of P3 is 9
- D. Waiting Time of P2 is 0

Correct Answers: A, B, C

Q32. Using FCFS Scheduling:

Process | AT | BT

P1 | 0 | 5

P2 | 2 | 3

P3 | 4 | 1

Which statements are TRUE?

- A. P1 completes at time 5
- B. P2 completes at time 8
- C. P3 completes at time 9
- D. Average Turnaround Time is 3

Correct Answers: A, B, C

Q33. Using Non-Preemptive SJF Scheduling:

Process | AT | BT

P1 | 0 | 4

P2 | 1 | 2

P3 | 2 | 1

Which statements are TRUE?

- A. P1 executes first
- B. P3 executes before P2
- C. Execution order is $P1 \rightarrow P3 \rightarrow P2$
- D. Completion Time of P2 is 7

Correct Answers: A, B, C, D

Q34. Using Non-Preemptive SJF Scheduling:

Process | AT | BT

P1 | 0 | 6

P2 | 2 | 3

P3 | 3 | 2

P4 | 5 | 1

Which statements are TRUE?

- A. P1 executes first
- B. After P1, P4 executes next
- C. Execution order is $P1 \rightarrow P4 \rightarrow P3 \rightarrow P2$
- D. Completion Time of P2 is 12

Correct Answers: A, B, C, D

Q35. Using SRTF Scheduling:

Process | AT | BT

P1 | 0 | 5

P2 | 1 | 2

P3 | 2 | 1

Which statements are TRUE?

- A. P2 preempts P1 at time 1
- B. P3 preempts P2 at time 2
- C. P3 completes at time 3
- D. P1 completes before P2

Correct Answers: A

Q36. Using SRTF Scheduling:

Process | AT | BT

P1 | 0 | 7

P2 | 2 | 4

P3 | 4 | 1

Which statements are TRUE?

- A. P2 preempts P1 at time 2
- B. P3 executes before P2 completes

- C. P3 completes at time 5
- D. P1 completes first

Correct Answers: A, B, C

Q37. Using Non-Preemptive Priority Scheduling

(Higher number = Higher Priority)

Process	AT	BT	Priority
P1	0	4	2
P2	1	3	5
P3	2	2	3

Which statements are TRUE?

- A. P1 executes first
- B. P2 executes after P1
- C. P3 executes before P2
- D. Completion Time of P3 is 9

Correct Answers: A, B, D

Q38. Using Preemptive Priority Scheduling

(Higher number = Higher Priority)

Process	AT	BT	Priority
P1	0	6	2
P2	1	3	4
P3	2	2	5

Which statements are TRUE?

- A. P2 preempts P1
- B. P3 preempts P2
- C. P3 completes before P2
- D. P1 completes at time 11

Correct Answers: A, B, C, D

Q39. Using Round Robin Scheduling

(Time Quantum = 2)

Process | AT | BT

P1 | 0 | 4

P2 | 1 | 3

P3 | 2 | 2

Which statements are TRUE?

- A. P1 executes more than once
- B. P3 completes in its first turn
- C. P2 gets CPU before P1 completes
- D. Context switching occurs

Correct Answers: A, B, C, D

Q40. Using Round Robin Scheduling

(Time Quantum = 3)

Process | AT | BT

P1 | 0 | 5

P2 | 1 | 4

Which statements are TRUE?

- A. P1 first runs from 0 to 3
- B. P2 gets CPU before P1 completes
- C. P1 completes at time 8
- D. P2 completes at time 9

Correct Answers: A, B, C, D

Q41. A class Animal has a method sound(). Class Dog extends Animal and overrides sound(). Which statements are TRUE?

- A. Method overriding is shown
- B. Runtime polymorphism may be shown

- C. Dog can provide its own version of sound()
- D. This is an example of process scheduling

Correct Answers: A, B, C

Q42. Which statements about Encapsulation are TRUE?

- A. Data can be hidden using private variables
- B. Public methods may provide controlled access
- C. Encapsulation improves data protection
- D. Encapsulation means every variable must be public

Correct Answers: A, B, C

Q43. A class **Learner has a private variable **marks** and a public method **getMarks()**. Which OOPS concept is mainly shown here?**

- A. Encapsulation
- B. Controlled access to data
- C. Direct public exposure of all data
- D. CPU scheduling

Correct Answers: A, B

Q44. Which statements about Inheritance are TRUE?

- A. A child class can reuse parent class properties
- B. Inheritance supports code reuse
- C. Java supports multiple inheritance using classes
- D. extends keyword is used for class inheritance

Correct Answers: A, B, D

Q45. Which statements about Abstract Classes are TRUE?

- A. They can have abstract methods
- B. They can have normal methods
- C. They can have constructors
- D. They can always be directly instantiated

Correct Answers: A, B, C

Q46. Which statements about Interfaces are TRUE?

- A. They define a contract for classes
- B. A class uses implements to implement an interface
- C. Interface references can point to implementing class objects
- D. Interfaces are used only for CPU scheduling

Correct Answers: A, B, C

Q47. A class Payment implements Payable. The interface Payable has a method pay(). Which statements are TRUE?

- A. Payment must define pay()
- B. Payable can be used as a reference type
- C. This supports abstraction
- D. Payment cannot have any other method

Correct Answers: A, B, C

Q48. Which statements about Polymorphism are TRUE?

- A. Same method call can behave differently for different objects
- B. Parent reference can point to child object

- C. It supports flexible code design
- D. It means a class cannot have methods

Correct Answers: A, B, C

Q49. An abstract class `Course` has one normal method `showCourse()` and one abstract method `startClass()`. Class `JavaCourse` extends `Course`. Which statements are TRUE?

- A. `JavaCourse` must implement `startClass()` unless it is also abstract
- B. `showCourse()` can be reused by `JavaCourse`
- C. `Course` can be directly instantiated using `new Course()`
- D. Abstract classes can contain both normal and abstract methods

Correct Answers: A, B, D

Q50. A class `Shape` has an abstract method `area()`. `Circle` and `Rectangle` extend `Shape` and define `area()`. Which statements are TRUE?

- A. `Shape` is an abstract class
- B. `Circle` and `Rectangle` provide implementation of `area()`
- C. `Shape` reference can store `Circle` object
- D. Abstract classes cannot be used as reference types

Correct Answers: A, B, C

Q51. Which statements about `Dispatcher` are TRUE?

- A. `Dispatcher` gives CPU control to selected process
- B. `Dispatcher` performs context switching
- C. `Dispatcher` works with the scheduler
- D. `Dispatcher` permanently stores files on disk

Correct Answers: A, B, C

Q52. Which statements about Non-Preemptive Scheduling are TRUE?

- A. Running process keeps CPU until completion or waiting state
- B. FCFS is non-preemptive
- C. SJF may be non-preemptive
- D. CPU can interrupt the process anytime forcibly in pure non-preemptive scheduling

Correct Answers: A, B, C

Q53. Which statements about Preemptive Scheduling are TRUE?

- A. Running process may be interrupted
- B. Round Robin is preemptive
- C. SRTF is preemptive
- D. Preemptive scheduling never causes context switching

Correct Answers: A, B, C

Q54. Which statements about Turnaround Time are TRUE?

- A. It includes waiting time
- B. It includes execution time
- C. Lower turnaround time is generally desirable
- D. Turnaround Time always equals Burst Time

Correct Answers: A, B, C

Q55. Which statements about Waiting Time are TRUE?

- A. It represents time spent waiting for CPU
- B. It depends on scheduling algorithm
- C. Lower waiting time improves efficiency
- D. Waiting Time always equals Arrival Time

Correct Answers: A, B, C

Q56. Using FCFS Scheduling:

Process | AT | BT

P1 | 0 | 2

P2 | 2 | 5

P3 | 4 | 1

Which statements are TRUE?

- A. P1 completes at time 2
- B. P2 completes at time 7
- C. P3 completes at time 8
- D. P3 executes before P2

Correct Answers: A, B, C

Q57. Using Non-Preemptive SJF Scheduling:

Process | AT | BT

P1 | 0 | 8

P2 | 1 | 3

P3 | 2 | 2

Which statements are TRUE?

- A. P1 executes first
- B. P3 executes before P2
- C. Execution order is $P1 \rightarrow P3 \rightarrow P2$
- D. P2 completes at time 13

Correct Answers: A, B, C, D

Q58. Using SRTF Scheduling:

Process | AT | BT

P1 | 0 | 4

P2 | 1 | 1

P3 | 2 | 2

Which statements are TRUE?

- A. P2 preempts P1
- B. P2 completes at time 2
- C. P3 executes before P1 completes
- D. P1 completes first

Correct Answers: A, B, C

Q59. Using Preemptive Priority Scheduling

(Higher number = Higher Priority)

Process | AT | BT | Priority

P1 | 0 | 5 | 2

P2 | 2 | 2 | 6

Which statements are TRUE?

- A. P2 preempts P1
- B. P2 completes before P1
- C. P1 runs continuously till completion
- D. Higher priority affects CPU allocation

Correct Answers: A, B, D

Q60. Using Round Robin Scheduling

(Time Quantum = 2)

Process | AT | BT

P1 | 0 | 3

P2 | 1 | 4

Which statements are TRUE?

- A. P1 executes more than once
- B. P2 gets CPU before P1 completes

- C. Context switching occurs
- D. P1 completes in first quantum

Correct Answers: A, B, C

Q61. A user clicks on an application icon and the application starts loading. Which OS activities may happen?

- A. Loading the program into memory
- B. Creating a process
- C. Allocating required resources
- D. Manually changing the source code

Correct Answers: A, B, C

Q62. Which statements about Resource Allocation are TRUE?

- A. OS decides how CPU is shared among processes
- B. OS manages memory allocation
- C. OS may manage access to I/O devices
- D. OS gives every process unlimited resources

Correct Answers: A, B, C

Q63. Which statements about Protection in an OS are TRUE?

- A. It prevents one process from harming another process
- B. It controls access to system resources
- C. It allows every program to directly modify kernel data
- D. It improves system reliability

Correct Answers: A, B, D

Q64. Which statements about the Command Line Interface are TRUE?

- A. Users interact by typing commands
- B. It is one type of user interface provided by an OS
- C. It always requires clicking icons only
- D. It can be used to run programs

Correct Answers: A, B, D

Q65. Which statements about Graphical User Interface are TRUE?

- A. It allows interaction using windows and icons
- B. It is easier for many beginners to use
- C. It is not related to OS interaction at all
- D. It may internally trigger OS services

Correct Answers: A, B, D

Q66. A process is created but has not yet been admitted to the ready queue. Which state best describes it?

- A. New
- B. Running
- C. Waiting
- D. Terminated

Correct Answer: A

Q67. A process has completed execution and released its resources. Which state best describes it?

- A. Terminated
- B. Ready
- C. Running
- D. Waiting

Correct Answer: A

Q68. Which statements about Process State are TRUE?

- A. It helps the OS track what a process is doing
- B. It may change during execution
- C. It is stored as part of process-related information
- D. It always remains Running from start to finish

Correct Answers: A, B, C

Q69. Which statements about Long-Term Scheduler are TRUE?

- A. It controls admission of processes into the system
- B. It affects degree of multiprogramming
- C. It always selects the next process for immediate CPU execution
- D. It may decide which jobs enter the ready queue

Correct Answers: A, B, D

Q70. Which statements about Short-Term Scheduler are TRUE?

- A. It selects a process from the ready queue
- B. It decides which process gets CPU next
- C. It runs frequently
- D. It only manages files and folders

Correct Answers: A, B, C

Q71. Which statements about Medium-Term Scheduler are TRUE?

- A. It may swap processes out of memory
- B. It may reduce degree of multiprogramming temporarily
- C. It is related to process management
- D. It always performs Java method overriding

Correct Answers: A, B, C

Q72. Which statements about CPU Burst are TRUE?

- A. It is the time a process needs on CPU
- B. It is used in scheduling numericals
- C. It is always zero for every process
- D. It may vary from process to process

Correct Answers: A, B, D

Q73. Which statements about I/O Burst are TRUE?

- A. It is the time a process spends doing I/O activity
- B. A process may alternate between CPU burst and I/O burst
- C. It is unrelated to process execution
- D. Waiting for I/O may move a process out of Running state

Correct Answers: A, B, D

Q74. Which statements about Response Time are TRUE?

- A. It measures time from arrival to first CPU allocation
- B. It is important in interactive systems
- C. Lower response time is usually better
- D. It always equals completion time

Correct Answers: A, B, C

Q75. Which statements about Gantt Charts in CPU Scheduling are TRUE?

- A. They show execution order of processes
- B. They help calculate completion time
- C. They show time intervals for CPU allocation
- D. They are used only for inheritance diagrams

Correct Answers: A, B, C

Q76. Using FCFS Scheduling:

Process | AT | BT

P1 | 0 | 4

P2 | 4 | 3

P3 | 5 | 2

Which statements are TRUE?

- A. P1 completes at time 4
- B. P2 completes at time 7
- C. P3 completes at time 9
- D. P3 executes before P2

Correct Answers: A, B, C

Q77. Using FCFS Scheduling:

Process | AT | BT

P1 | 2 | 3

P2 | 5 | 2

P3 | 6 | 1

Which statements are TRUE?

- A. CPU remains idle from time 0 to 2
- B. P1 completes at time 5
- C. P2 completes at time 7
- D. P3 completes before P2

Correct Answers: A, B, C

Q78. Using Non-Preemptive SJF Scheduling:

Process | AT | BT

P1 | 0 | 2

P2 | 1 | 6

P3 | 2 | 3

P4 | 3 | 1

Which statements are TRUE?

- A. P1 executes first
- B. P4 executes immediately after P1
- C. Execution order is $P1 \rightarrow P4 \rightarrow P3 \rightarrow P2$
- D. P2 completes at time 12

Correct Answers: A, D

Q79. Using Non-Preemptive SJF Scheduling:

Process | AT | BT

P1 | 1 | 4

P2 | 2 | 2

P3 | 3 | 1

Which statements are TRUE?

- A. CPU is idle from time 0 to 1
- B. P1 executes first
- C. P3 executes before P2
- D. Completion Time of P2 is 8

Correct Answers: A, B, C, D

Q80. Using SRTF Scheduling:

Process | AT | BT P1 | 0 | 5 P2 | 1 | 4 P3 | 2 | 1

Which statements are TRUE? A. P1 is not preempted by P2 at time 1 B. P3 preempts P1 at time 2 C. P3 completes at time 3 D. P2 completes before P1

Correct Answers: A, B, C

Q81. Using SRTF Scheduling:

Process | AT | BT

P1 | 0 | 9

P2 | 3 | 2

P3 | 4 | 1

Which statements are TRUE?

- A. P2 preempts P1 at time 3
- B. P3 preempts P2 at time 4
- C. P3 completes at time 5
- D. P1 completes before P2

Correct Answers: A, B, C

Q82. Using Non-Preemptive Priority Scheduling

(Higher number = Higher Priority)

Process | AT | BT | Priority

P1 | 0 | 3 | 1

P2 | 1 | 4 | 3

P3 | 2 | 2 | 5

Which statements are TRUE?

- A. P1 executes first
- B. P3 executes after P1
- C. P2 executes after P3
- D. Completion Time of P2 is 9

Correct Answers: A, B, C, D

Q83. Using Preemptive Priority Scheduling

(Higher number = Higher Priority)

Process	AT	BT	Priority
P1	0	4	3
P2	1	5	2
P3	2	1	6

Which statements are TRUE?

A. P2 does not preempt P1 at time 1

B. P3 preempts P1 at time 2

C. P3 completes at time 3

D. P1 completes before P3

Correct Answers: A, B, C

Q84. Using Round Robin Scheduling

(Time Quantum = 1)

Process	AT	BT
P1	0	2
P2	0	2
P3	0	1

Which statements are TRUE?

A. Each process gets CPU in turns

B. P3 can complete in one CPU turn

C. Time quantum is 1 unit

D. Round Robin is non-preemptive here

Correct Answers: A, B, C

Q85. Using Round Robin Scheduling

(Time Quantum = 4)

Process	AT	BT
P1	0	3
P2	1	6
P3	2	2

Which statements are TRUE?

- A. P1 completes in its first turn
- B. P2 does not complete in its first turn
- C. P3 completes in its first turn
- D. P2 needs another turn after its first quantum

Correct Answers: A, B, C, D

Q86. Which statements about Class and Object are TRUE?

- A. A class is a blueprint
- B. An object is an instance of a class
- C. Objects can have state and behavior
- D. A class and object always mean the same thing

Correct Answers: A, B, C

Q87. Which statements about Constructor Overloading are TRUE?

- A. A class may have multiple constructors
- B. Constructor parameter lists must differ
- C. It helps initialize objects in different ways
- D. Constructor overloading requires inheritance

Correct Answers: A, B, C

Q88. Which statements about `final` methods in Java are TRUE?

- A. A final method cannot be overridden
- B. A final method can still be called
- C. final methods are related to controlling inheritance behavior
- D. final methods must always be abstract

Correct Answers: A, B, C

Q89. Which statements about `super` in method overriding are TRUE?

- A. It can call the parent version of an overridden method
- B. It can be useful when child method wants to reuse parent behavior
- C. It refers to the current class object only
- D. It can access parent constructor using `super()`

Correct Answers: A, B, D

Q90. Which statements about Interface Implementation are TRUE?

- A. A concrete class implementing an interface must define its abstract methods
- B. The `implements` keyword is used
- C. One class can implement more than one interface
- D. Implementing an interface prevents object creation of the class

Correct Answers: A, B, C

Q91. Which statements about Abstract Class References are TRUE?

- A. An abstract class reference can point to a child object
- B. Abstract class references support polymorphism
- C. Abstract class objects can always be created directly
- D. Child overridden methods may run through parent reference

Correct Answers: A, B, D

Q92. Which statements about Interface References are TRUE?

- A. Interface reference can point to implementing class object
- B. Interface reference helps write flexible code
- C. Interface reference can call methods declared in interface
- D. Interface reference always stores only primitive values

Correct Answers: A, B, C

Q93. A class Account keeps balance private and provides deposit() and getBalance(). Which statements are TRUE?

- A. Encapsulation is shown
- B. Direct access to balance is restricted
- C. Public methods provide controlled access
- D. This is an example of Round Robin scheduling

Correct Answers: A, B, C

Q94. A parent class Employee has method work(). Developer and Designer extend Employee and override work(). Which statements are TRUE?

- A. Inheritance is shown
- B. Method overriding is shown
- C. Polymorphism can be achieved
- D. Employee cannot be used as a reference type

Correct Answers: A, B, C

Q95. Which statements about Default Access Modifier are TRUE?

- A. It is also called package-private access
- B. No access modifier keyword is written
- C. It allows access within the same package
- D. It allows access from all packages like public

Correct Answers: A, B, C

Q96. Which statements about private members are TRUE?

- A. They are accessible inside the same class
- B. They help in data hiding
- C. They can be accessed directly from any unrelated class
- D. They are commonly used in encapsulation

Correct Answers: A, B, D

Q97. Which statements about protected members are TRUE?

- A. They can be accessed inside the same package
- B. They can be accessed in subclasses under valid inheritance rules
- C. They are more restrictive than private in every situation
- D. They are related to access control

Correct Answers: A, B, D
